WEMCO Fabrication Department

- **AWS D1.1 / D1.1M & WABO Certifications**

- All of WEMCO's highly skilled welders are AWS D1.1/ D1.1M Unlimited Thickness and 3G positioning certified. As well, they all have their WABO certification cards.
- WEMCO has been a leader in the equipment manufacturing market for Concrete Plants and Self Propelled Potato Harvesters for the last 25 years. It is these demanding and rigorous fields that have forged our welding practices and quality control procedures. Employees at WEMCO take the quality of their work to heart; it is this heart that provides our customers the quality fabrication that keeps their equipment running year after year.
- Our fabrication facility consists of two 10-ton overhead bridge cranes able to handle jobs of all sizes, and a 150ftx20ft layout table laser leveled to 0.01in over every 60ft. It is this layout table that sets us apart from our competition allowing us to hold higher tolerances than the rest of the field in fabrication work. These tables lay a solid foundation for every piece of equipment that WEMCO sends into the field.
- Our welders are trained in using the proper type and size welding wire and gas combinations for many different welding processes from hard facing wear parts to making a perfect weld on a piece of structural tube or beam.
